

Come to PBS for your global supply chain management.

»The excellent service offered by PBS logistics gives us a direct line and continuous contact with the sales departments of our European suppliers. This ensures us an unbroken supply chain from order placement until the goods arrive in our store. PBS's service has brought our European suppliers as close as our local Johannesburg suppliers.«

Stuart Scott, Commercial Manager, South Africa

Fast, lean and disciplined supply chains are a key success factor for today's global industries. PBS specializes in proactive purchase order management, driving purchase orders dynamically through manufacturing and transportation processes. Our PBS logistics team of professional expeditors is linked with our customers' production planners and is responsible for pulling orders in from a local and global supply base.

Our years of experience and investment in state-of-the-art systems result in top efficiency and competitiveness. We have a proven service record in the automotive industry (tier1, 2), railroad, and (energy) infrastructure industries. Our projects include monitoring of series delivery operations as well as steering of phase-in or phase-out processes.

POM - Purchase Order Management

»In the Automobile Industry, we need speed, agility and reliable partners. PBS gives us all and stays as a valuable link on our supply chain.«

Manfred Wimber, Advanced Logistics Supervisor, Brasil

If you want to achieve on-time delivery, then the sub-supplier's planning and manufacturing processes must run smoothly. When you work with PBS, we start following-up the moment the order is placed. We request order confirmation within 2 working days, uncover

potential deviations (date, quantity) and eliminate them, control milestones, follow-up and approve actual dispatch date. Our mission is to ensure that orders are produced and that the supply chain is filled on time for the most cost - efficient transportation.

Your Benefits

Reduced Time

PBS Logistics helps you meet the ever increasing demands for faster and leaner supply chains in the global economy.

Reduced Risk

Pro-active purchase order management allows you to identify and eliminate potential risks and react in time to avoid escalation.

Reduced Cost

Competent POM allows you to take advantage of the most affordable transportation methods to optimize total inbound cost and to drive smaller lot sizes through the chain for cash flow optimization.

Increased Transparency

You have the information you need for effective supply chain control and layout planning of complex logistics projects.

e-Xpedite – Powerful POM Tool

- Get access to a customer-oriented, simple-to-use online POM tool with incorporated tracking function
- Enable supervision of all orders by product, project or supplier
- Integrate customer, supplier and forwarder data into a single platform with specific access rights for all involved parties
- Take advantage of an online tool which is completely SAP compatible
